TYPES 7189 7189A

MECHANICAL DATA

Bulb ........................................... T-6 1/4
Base ........................................... E9-1, Miniature Button 9-Pin
Outline ......................................... 6-4
Basing ........................................... (7189A)-9LE, (7189)-9CV
Cathode coating .............................. Coated Unipotential
Mounting Position .......................... Any

ELECTRICAL DATA

HEATER CHARACTERISTICS

Heater Voltage .................................. 6.3 Volts
Heater Current .................................. 760 Ma
Maximum Heater Voltage Range 1 .............. 5.7-6.9 Volts
Heater-Cathode Voltage (Design Maximum Values) ....
   Heater Negative with Respect to Cathode ...... 100 Volts Max.
   Heater Positive with Respect to Cathode .... 100 Volts Max.

DIRECT INTERELECTRODE CAPACITANCES

Grid No. 1 to Plate ................................ 0.5 μF Max.
Input ............................................. 10.8 μF Max.
Output ........................................... 6.5 μF Max.
Grid No. 1 to Heater ................................ 0.25 μF Max.

RATINGS (Design Maximum Values) 1

Class AB1 Pentode Conn. Class AB1 Ultra-linear Conn.

Plate Voltage .................................. 440 415 Volts Max.
Grid No. 2 Voltage (400V-7189A) ............... 330 ... Volts Max.
Plate Dissipation ................................ 13.2 13.2 Watts Max.
Grid No. 2 Dissipation (Zero Signal) ........... 2.2 2.2 Watts Max.
Grid No. 2 Dissipation (Max. Signal) ............ 4.4 4.4 Watts Max.
Cathode Current ................................ 72 72 Ma Max.
Grid No. 1 Circuit Resistance ................. 0.3 0.3 Megohm Max.
Fixed Bias ...................................... 1.0 1.0 Megohm Max.
Cathode Bias .................................. 1.0

CHARACTERISTICS AND TYPICAL OPERATION

Class AB1 Pentode Conn. Class AB1 Ultra-linear Conn.

Plate Voltage .................................. 250 400 375 Volts
Grid No. 2 Voltage ............................. 250 300 Note 3 Volts
Grid No. 1 Voltage ............................. −7.3 −15 ... Volts
Cathode Resistor ............................... ... 220 Ohms
Grid Voltage (RMS) ............................ 10.5 12.5 Volts
Plate Current (Zero Signal) ................... 48 15 70 Ma
Plate Current (Max. Signal) ................. 105 81 Ma

SYLVANIA ELECTRONIC TUBES

### NOTES:

1. Design-Maximum Ratings are limiting values of operating and environmental conditions applicable to a beam electron device of a specified type as defined by its published data, and should not be exceeded under the worst probable conditions.

2. The device manufacturer chooses these values to provide acceptable serviceability of the device, taking responsibility for the effects of changes in operating conditions due to variations in device characteristics.

3. The equipment manufacturer should design so that initially and throughout life no design-maximum value for the intended service is exceeded with a beam electron device under the worst probable operating conditions with respect to supply-voltage variation, equipment component variation, equipment control adjustment, load variation, signal variation, and environmental conditions.

4. Type 7189A Grid No. 2 is rated at 400 volts and Type 7189 Grid No. 2 is rated at 330 volts for pentode connected operation. Type 7189A is rated at 415 volts when used in an ultra-linear circuit.

5. Grid No. 2 voltage is obtained from tape located at 43 percent of the output transformer windings.

### APPLICATION

The Types 7189 and 7189A are beam power pentode audio amplifiers designed for service in the output stage of high quality audio amplifiers or other equipment requiring high power output at relative low distortion.

Type 7189A differs from Type 7189 in having a higher Grid No. 2 voltage rating and in specifying the internal connections to Pin No. 1 and No. 6.
